## 1 Motivation

# 2 Basics

- 3 Computing CQA
- Computational Complexity

## 5 Dichotomy

6 Variants of CQA

## Conclusions

-

イロト イヨト イヨト イ

# Database instance D:

- a finite first-order structure
- the information about the world

・ロト ・回ト ・ヨト

## Database instance D:

- a finite first-order structure
- the information about the world

# Integrity constraints IC

- first-order logic formulas
- the properties of the world

## Database instance D:

- a finite first-order structure
- the information about the world

# Integrity constraints IC

- first-order logic formulas
- the properties of the world

イロト イヨト イヨト イ

Satisfaction of constraints:  $D \models IC$ 

Formula satisfaction in a first-order structure.

## Database instance D:

- a finite first-order structure
- the information about the world

# Integrity constraints IC

- first-order logic formulas
- the properties of the world

イロト イヨト イヨト イヨ

### Satisfaction of constraints: $D \models IC$

Formula satisfaction in a first-order structure.

Consistent database:  $D \models IC$ 

Name	City	Salary
Gates	Redmond	30M
Musk	Palo Alto	10M
Name  o City  Salary		

## Database instance D:

- a finite first-order structure
- the information about the world

# Integrity constraints IC

- first-order logic formulas
- the properties of the world

### Satisfaction of constraints: $D \models IC$

Formula satisfaction in a first-order structure.

Consistent database:  $D \models IC$ 

Name	City	Salary
Gates	Redmond	30M
Musk	Palo Alto	10M
Name  o City  Salary		

Inconsistent database:  $D \not\models IC$ Name City Salary Gates Redmond 20M Gates Redmond 30M Musk Palo Alto 10M Name  $\rightarrow$  City Salary

# Sources of inconsistency:

- integration of independent data sources with overlapping data
- time lag of updates (eventual consistency)
- unenforced integrity constraints

### Sources of inconsistency:

- integration of independent data sources with overlapping data
- time lag of updates (eventual consistency)
- unenforced integrity constraints

#### Eliminating inconsistency?

- not enough information, time, or money
- difficult, impossible or undesirable
- unnecessary: queries may be insensitive to inconsistency

### Sources of inconsistency:

- integration of independent data sources with overlapping data
- time lag of updates (eventual consistency)
- unenforced integrity constraints

### Traditional view

- query results defined irrespective of integrity constraints
- query evaluation may be optimized in the presence of integrity constraints (semantic query optimization)

#### Our view

- inconsistency leads to uncertainty
- query results may depend on integrity constraint satisfaction
- inconsistency may be eliminated (repairing) or tolerated (consistent query answering)

• • • • • • • • • • • • •

## Applications

• data cleaning

# Repair D' of a database D w.r.t. the integrity constraints IC:

- D': over the same schema as D
- $D' \models IC$
- symmetric difference between D and D' is minimal.

・ロト ・回ト ・ヨト ・ヨ

## Repair D' of a database D w.r.t. the integrity constraints IC:

- D': over the same schema as D
- $D' \models IC$
- symmetric difference between D and D' is minimal.

# Consistent query answer to a query Q in D w.r.t. IC:

• an element of the result of Q in every repair of D w.r.t. IC.

(日) (同) (三) (三) (三)
### Repair D' of a database D w.r.t. the integrity constraints IC:

- D': over the same schema as D
- $D' \models IC$
- symmetric difference between D and D' is minimal.

# Consistent query answer to a query Q in D w.r.t. IC:

• an element of the result of Q in every repair of D w.r.t. IC.

Another incarnation of the idea of sure/certain query answers (Lipski [Jr.79]).

• • • • • • • • • • • •

# Logical inconsistency

- inconsistent database: database facts together with integrity constraints form an inconsistent set of formulas
- trivialization of reasoning does not occur because constraints are not used in relational query evaluation.

・ロト ・回ト ・ヨト ・

# Example relation R(A, B)

- ${\scriptstyle \bullet }$  violates the dependency  ${\it A} \rightarrow {\it B}$
- has 2<sup>n</sup> repairs.

- ${\scriptstyle \bullet }$  violates the dependency  $A \rightarrow B$
- has 2<sup>n</sup> repairs.

#### It is impractical to apply the definition of CQA directly.

# Computing Consistent Query Answers

# Query Rewriting

Given a query Q and a set of integrity constraints IC, build a query  $Q^{IC}$  such that for every database instance D

the set of answers to  $Q^{IC}$  in D = the set of consistent answers to Q in D w.r.t. IC.

# Computing Consistent Query Answers

# Query Rewriting

Given a query Q and a set of integrity constraints IC, build a query  $Q^{IC}$  such that for every database instance D

the set of answers to  $Q^{IC}$  in D = the set of consistent answers to Q in D w.r.t. IC.

#### Representing all repairs

Given IC and D:

- **9** build a space-efficient representation of all repairs of D w.r.t. IC
- use this representation to answer (many) queries.

#### Logic programs

Given IC, D and Q:

- **()** build a logic program  $P_{IC,D}$  whose models are the repairs of D w.r.t. IC
- 2 build a logic program  $P_Q$  expressing Q
- I use a logic programming system that computes the query atoms present in all models of P<sub>IC,D</sub> ∪ P<sub>Q</sub>.

Universal constraints

 $\forall. A_1 \wedge \cdots \wedge A_n \Rightarrow B_1 \vee \cdots \vee B_m$ 

・ロト ・回ト ・ヨト ・ヨト

# Universal constraints

$$\forall. A_1 \wedge \cdots \wedge A_n \Rightarrow B_1 \vee \cdots \vee B_m$$

# Example

$$\forall. \mathsf{Par}(x,y) \Rightarrow \mathsf{Ma}(x,y) \lor \mathsf{Fa}(x,y)$$

◆□ > ◆□ > ◆臣 > ◆臣 >

Universal constraints

 $\forall. A_1 \wedge \cdots \wedge A_n \Rightarrow B_1 \vee \cdots \vee B_m$ 

Tuple-generating dependencies

 $\forall. A_1 \wedge \cdots \wedge A_n \Rightarrow B$ 

# Example

$$\forall. \mathsf{Par}(x,y) \Rightarrow \mathsf{Ma}(x,y) \lor \mathsf{Fa}(x,y)$$

Universal constraints

 $\forall. A_1 \wedge \cdots \wedge A_n \Rightarrow B_1 \vee \cdots \vee B_m$ 

# Tuple-generating dependencies

 $\forall. A_1 \wedge \cdots \wedge A_n \Rightarrow B$ 

# Example

$$\forall. \mathsf{Par}(x,y) \Rightarrow \mathsf{Ma}(x,y) \lor \mathsf{Fa}(x,y)$$

## Example

$$\forall. Ma(x, y) \land Ma(x, z) \Rightarrow Sib(y, z)$$

・ロト ・回ト ・ヨト ・ヨト

# Universal constraints

 $\forall. A_1 \wedge \cdots \wedge A_n \Rightarrow B_1 \vee \cdots \vee B_m$ 

# Tuple-generating dependencies

 $\forall. A_1 \wedge \cdots \wedge A_n \Rightarrow B$ 

#### Denial constraints

 $\forall . \neg (A_1 \land \cdots \land A_n)$ 

### Example

$$\forall. \mathsf{Par}(x,y) \Rightarrow \mathsf{Ma}(x,y) \lor \mathsf{Fa}(x,y)$$

## Example

$$\forall. Ma(x, y) \land Ma(x, z) \Rightarrow Sib(y, z)$$

### Universal constraints

 $\forall. A_1 \wedge \cdots \wedge A_n \Rightarrow B_1 \vee \cdots \vee B_m$ 

### Tuple-generating dependencies

 $\forall. A_1 \wedge \cdots \wedge A_n \Rightarrow B$ 

#### Denial constraints

 $\forall . \neg (A_1 \land \cdots \land A_n)$ 

#### Example

$$\forall. \mathsf{Par}(x,y) \Rightarrow \mathsf{Ma}(x,y) \lor \mathsf{Fa}(x,y)$$

#### Example

$$\forall. Ma(x, y) \land Ma(x, z) \Rightarrow Sib(y, z)$$

### Example

 $\forall. \neg (M(n,s,m) \land M(m,t,w) \land s > t)$ 

### Universal constraints

 $\forall. A_1 \wedge \cdots \wedge A_n \Rightarrow B_1 \vee \cdots \vee B_m$ 

### Tuple-generating dependencies

 $\forall. A_1 \wedge \cdots \wedge A_n \Rightarrow B$ 

### Denial constraints

 $\forall . \neg (A_1 \land \cdots \land A_n)$ 

#### Functional dependencies

 $X \rightarrow Y$ :

• key dependency: Y = U

### Example

$$\forall. \mathsf{Par}(x,y) \Rightarrow \mathsf{Ma}(x,y) \lor \mathsf{Fa}(x,y)$$

#### Example

$$\forall. Ma(x,y) \land Ma(x,z) \Rightarrow Sib(y,z)$$

### Example

$$\forall. \neg (M(n,s,m) \land M(m,t,w) \land s > t)$$

# Universal constraints

 $\forall. A_1 \wedge \cdots \wedge A_n \Rightarrow B_1 \vee \cdots \vee B_m$ 

### Tuple-generating dependencies

 $\forall. A_1 \wedge \cdots \wedge A_n \Rightarrow B$ 

## Denial constraints

 $\forall$ .  $\neg$ ( $A_1 \land \cdots \land A_n$ )

### Functional dependencies

 $X \rightarrow Y$ :

• key dependency: Y = U

#### Inclusion dependencies

 $R[X] \subseteq S[Y]$ :

• a foreign key constraint: key Y

#### Example

$$\forall. \mathsf{Par}(x,y) \Rightarrow \mathsf{Ma}(x,y) \lor \mathsf{Fa}(x,y)$$

#### Example

$$\forall. Ma(x, y) \land Ma(x, z) \Rightarrow Sib(y, z)$$

## Example

 $\forall. \neg (M(n,s,m) \land M(m,t,w) \land s > t)$ 

Example primary-key dependency

 $\mathsf{Name} \to \mathsf{Address} \ \mathsf{Salary}$ 

Example foreign key constraint

### Theorem (Ch., Marcinkowski [CM05a])

For primary-key functional dependencies and conjunctive queries, consistent query answering is data-complete for co-NP.

・ロト ・回ト ・ヨト

### Theorem (Ch., Marcinkowski [CM05a])

For primary-key functional dependencies and conjunctive queries, consistent query answering is data-complete for co-NP.

#### Proof.

Membership: V is a repair iff  $V \models IC$  and  $W \not\models IC$  if  $W = V \cup M$ . Co-NP-hardness: reduction from MONOTONE 3-SAT.

- **9** Positive clauses  $\beta_1 = \phi_1 \wedge \cdots \wedge \phi_m$ , negative clauses  $\beta_2 = \psi_{m+1} \wedge \cdots \wedge \psi_l$ .
- 2 Database D contains two binary relations R(A, B) and S(A, B):
  - R(i, p) if variable p occurs in  $\phi_i$ , i = 1, ..., m.
  - S(i, p) if variable p occurs in  $\psi_i$ , i = m + 1, ..., l.
- A is the primary key of both R and S.
- Query  $Q \equiv \exists x, y, z. (R(x, y) \land S(z, y)).$
- (a) There is an assignment which satisfies  $\beta_1 \wedge \beta_2$  iff there exists a repair in which Q is false.

### Good News

#### Technology

- practical methods for CQA for subsets of SQL:
  - restricted conjunctive/aggregation queries, primary/foreign-key constraints
  - quantifier-free queries, denial constraints/acyclic TGDs/JDs
  - LP-based approaches for expressive query/constraint languages
- (slow) emergence of generic techniques
- implemented in prototype systems
- tested on medium-size databases

• • • • • • • • • • • • •

#### Topics of recent interest

- CQA under prioritized repairs
- CQA and knowledgebases
- CQA and temporal databases
- repairing: algorithms, heuristics
- repairing the database and the schema
- CQA and data exchange

#### Open issues

- inconsistency and incompleteness
- CQA and schema matching/mapping

#### Topics of recent interest
